- ▶ Manual Order Picking
- ▶ Incoming/ Outgoing Goods
- ▶ Sorting of Goods
- ▶ Inventory and Deficiencies

xPick is an innovative "pick-by-vision" order picking solution. It supports manual order picking, incoming, outgoing and sorting of goods as well as inventory management.

xPick allows for hands-free order picking with high speed while at the same time being able to reduce the number of picking errors. With optional modules, e.g. for weight checks, barcode scans, localization, or voice confirmations, error rates can be further reduced.

User acceptance is usually very high due to the innovative graphical user interface design. xPick offers enormous customization flexibility and does not rely on any electronics in the environment except Wi-Fi.
