MACHINE WORKFLOW

1 PRODUCT INPUT AND FANFOLD FEEDING

Product is fed manually and then scanned. A cubiscan detects the 3 dimensions and trigs the fanfold feeder. Cardboard is unwound on demand, based on the box size to be produced.

2-3 BOX FORMING AND CLOSING SECTION 1

Cardboard is cut, scored and trimmed. Inside panels are securely closed with hot melt glue. Product is then fed into the preformed box and other panels lifted and folded.

4 INVOICE PRINTER AND SELECTIVE ENCLOSURES

Module with invoice printer and folder directly managed by the machine controller and customer's database. Up to 4 enclosures can be added selectively.

5 CLOSING SECTION 2

Final flap closing with hot melt glue.

6 LABELLING SYSTEM AND OUTPUT

Adhesive label printer and applicator. Labels are printed in real time based on the data coming from PC CONTROLLER.

MACHINE HIGHLIGHTS

BOX EASY-OPENING

The box is perforated on the fly to facilitate the opening. In this way the box is not damaged during the opening and can be used for any returns.

IN-LINE INVOICE PRINTER

Invoices can be printed and optionally folded on the fly and inserted into the pre-formed box.

SELECTIVE ENCLOSURES

Up to 4 catalogues, brochures, leaflets, etc can be selectively fed into the box.

PACKVERTIZING

CMC Unique Concept. Data Driven On Demand Packaging and Advertising.

PC CONTROLLER

CMC Developed PC Carton manages the machine functions, exchanges data with customer's database and guarantees for total process integrity.

PERFECT SIZED BOX

MACHINE WORKFLOW

PRODUCT INDUCT

A consolidated multiple item order placed in a Vary-Tote, enters the machine to be scanned and dimensioned.

CORRUGATED CUT SHEET SPLICER

Cardboard sheets are picked from one pallet and spliced one to the other to create a single flow. Once a pallet is completed, the other one starts feeding in order not to stop production.

BOX CUTTING AND FORMING

Cardboard is dynamically cut, scored, trimmed and pre glued based on the dimension received from the Vary-Tote. The chipouts are collected on a dedicated belt.

PICK&PLACE AND BOX FORMING MODULE

A Pick&Place system moves the Vary-Tote towards the preformed flat. Items are accurately filled into the pre formed box which then is glued and sealed.

LABELLING SYSTEM AND OUTPUT

Adhesive label printer and applicator. Labels are printed in real time based on data coming from PC-CONTROLLER.

MACHINE HIGHLIGHTS

CMC VARY-TOTE

Fully designed and patented by CMC, CMC VaryTote® features two inner adjustable guides which are used to compact the items to the minimum possible volume. Thanks to the unique VaryTote® design, the operator can easily and quickly adapt the inner guides to each individual consignment that will determine the perfect box size.

IN-LINE INVOICE PRINTER

Invoices can be printed and optionally folded on the fly and inserted into the pre-formed box.

SELECTIVE ENCLOSURES

Up to 4 catalogues, brochures, leaflets, etc can be selectively fed into the box.

PACKVERTIZING

CMC Unique Concept. Data Driven On Demand Packaging and Advertising.

PC CONTROLLER

CMC Developed PC Carton manages the machine functions, exchanges data with customer's database and guarantees for total process integrity.

CMC VARY-TOTE: THE ROAD TO MULTI-ITEMS FULFILMENT

A Pick and Place device moves the filled Vary-Tote towards a variable pre-formed flat

Multiple items are placed into the Vary-Tote

The Vary-Tote bottom automatically slides and accurately releases the items into the box

A laser scanner reads the 3 dimensions of the consolidated order

MACHINE WORKFLOW

PRODUCT LOADING

Single items can be loaded either on the automatic feeder or in the manual station. A barcode on the item is then scanned.

INSERT FEEDERS

Selective feeders (1 to 6) for leaflets and brochures.

TWIN MAILER FEEDERS

The 1st feeder will be loaded with pre-printed mailers (Rigid or Padded). The 2nd optional feeder is for blank mailers that can be personalised on the fly.

LABELER & PRINTER

Automatic address labelling system, based on datafile. The optional full colour printer can add logos and marketing messages.

BAGGING/OUTPUT SECTION

The item is bagged into the mailer, the flap is hotmelt glued and final product placed on the collecting conveyor. This can also be integrated on existing systems. Faulty mailers will be diverted to a dedicated section before being glued so that they can be easily reprocessed.

MACHINE HIGHLIGHTS

AUTOMATIC OR MANUAL FEEDING

Possibility to feed items automatically or manually.
- Same size and shape products: through CMC feeder
- Variable items: on the manual station.

RIGID OR PADDED MAILERS

Items can be automatically bagged in different rigid or padded (bubble) mailers. Quick mailer size change-over.

SAVINGS IN SHIPMENT

CMC SMARTMAILER complements CMC Cartonwrap solution and allows to save shipping costs when small single items can be shipped in a padded mailer rather than a parcel.

PACKVERTIZING

CMC Unique Concept. Data Driven On Demand Packaging and Advertizing. Each mailer can be personalised on the fly with coloured logos and messages.

PC CONTROLLER

CMC Developed PC CONTROLLER manages the machine functions, exchanges data with customer's database and guarantees for total process integrity.

CMC SMART MAILER

AN ARRAY OF PRODUCTS TO BE SHIPPED

WHY BEING CHARGED FOR A PARCEL IF YOU CAN SHIP INTO A PADDED MAILER?

Packvertizing: The capability to produce different sized packages with variable personalized messages and images dynamically, using client's databases or unique barcodes. This unique concept was created in 2016 by CMC Srl and combines the award winning CMC CartonWrap technology with Full Colour Inkjet personalization on the package.

PackVertizing is a ground breaking concept which will revolutionize the way Companies communicate and deliver promotional messages and products to their customers. PackVertizing allows e-tailers and 3PLs to sell advertising space on the package to 3rd party companies as a potential profit stream. PackVertizing eliminates the need to produce pre-printed cartons and allows users to deliver ideas and concepts to the market quickly, it also reduces the need to hold large volumes of stock.

SAY GOODBYE TO BLAND BOXES

PACKAGING IS MORE THAN A BOX: IT'S ELEVATION OF BRANDING, EMOTIONS AND IMPACT ON CUSTOMERS

PACKVERTIZING APPLICATIONS

QR CODES

QR codes can directly connect the box to e-retailers videos, catalogues, etc.

ONLINE-OFFLINE EXPERIENCE

Data driven personalised recommendations to bring customers to brick and mortar stores and continue shopping.

PROMOTIONS

Personalised 1:1 promotions based on customer's habits or regional areas.

SHIPPING LABELS

Printed shipping labels with dynamic brands and messages rather than static adhesive ones.

COURIERS

3PL or e-tailers can add courier logos and sort boxes accordingly.

MAKE IT PERSONAL, MAKE IT WORK!

PACKVERTIZING APPLICATIONS

BRANDING

Dynamic company and product logos can build brand awareness and give the box a higher value.

GREETINGS

Greeting for special occasions with dynamic images and big names make the box personal.

GIFTS

Boring shipping parcels can turn into a nice gift boxes with colour and greetings.

ADVERTIZING

3PL or e-tailer can sell space for targeted advertising to 3rd parties. Incomes help offset shipping cost.

AUGMENTED REALITY

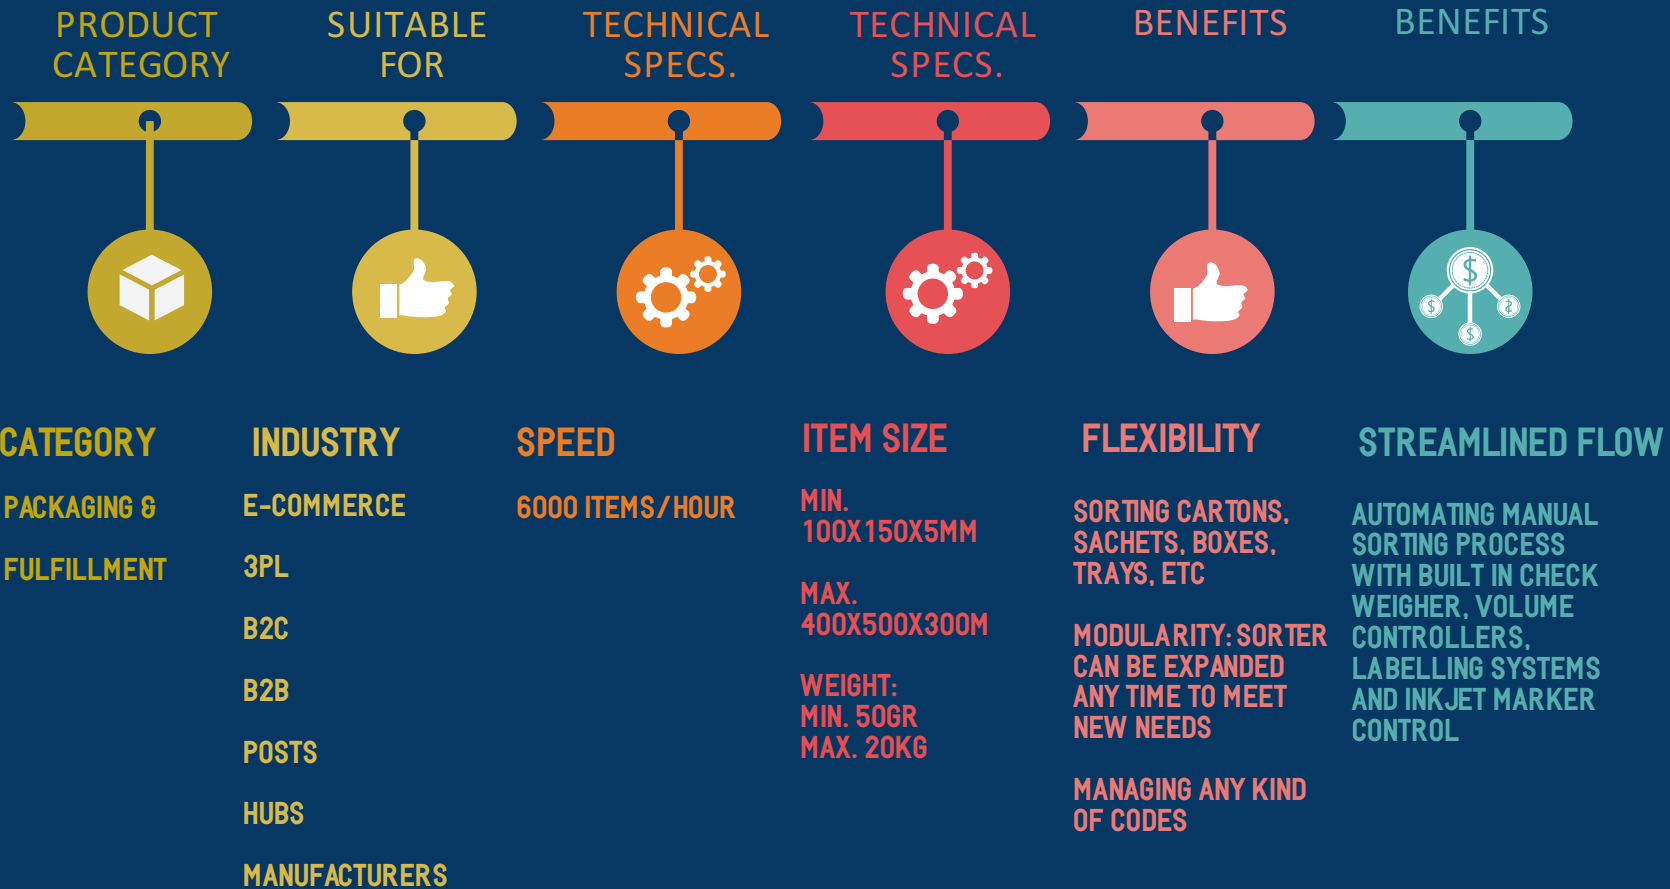

Augmented Reality animates the boxes: a real marketing instrument!!

SAY GOODBYE TO BLAND BOXES

CMC PARCEL SORTERS

AUTOMATED PARCEL SOLUTIONS

MACHINE WORKFLOW

PRODUCT INDUCT

Items (cartons, trays, boxes, sachets) are manually placed on a feeder conveyor.

PHASING

In case of multiple entries, products are delivered in perfect synchronisation before entering the main line.

**CODE READING
CHECK WEIGHER**

Items are identified by means of a reader and pass through a check weigher to detect the weights. Data are sent to a PC Controller to sort them accordingly.

LABELER

Optional label printer and apply system.

SORTING

Items are conveyed and automatically placed inside specific containers or shipping bags. Reject belt for miss-reads and fault packages.

MACHINE HIGHLIGHTS

FEEDING

Motorised conveyor belt for manual deposit of the product with diverters and rate regulators.

IDENTIFICATION

Datamatrix, Barcodes and OCR. Volumetrical analysis.

SORTING

Motorised roller conveyor, photocell detection and pneumatic rejection.

EXITS

Sloped sliding rails, automatic bags or container filling and manual picking area.

PC CONTROLLER

Programming keyboard, jobs monitoring, data restoration, log files creation.
